

# Pressure-Trol

Hydrostatic Testing Valve

Pressures from 10,000 - 20,000 PSI

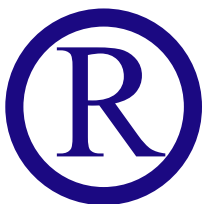

## Application/Features:

The Reliable Pumps Consultants, Inc. "Pressure-Trol Valve Assembly" is a single unit designed specifically for the hydrostatic testing of drill and production pipe, casing, or tubing. It can be used on both diesel and electric testing units. A special feature of the "Pressure-Trol" system allows the operator to regulate testing pressure and bleed off water with only two centrally located controls without having to "clutch" the engine. Its safe, simple operation keeps the operator in full control of the test process.

## Advantages:

- Increases production with simple to operate system.
- Built for continuous operation.
- Requires only ONE operator.
- Pump and motor start/stop eliminated.
- 60-second field overhaul.
- Can be used with most other manufactured pump units.
